

IMPORTANT NOTES REGARDING THE FRONT-END/Manual

NOTE – The **cyberarena.zip** file contains the entire files/folders required to run the .jsx file kindly unzip it. If you're not able to unzip the file then there are other files along with the main .jsx file, to run that jsx file you have to follow the process below.

- **.jsx file** - file is a JavaScript file that contains JSX (JavaScript XML) syntax, which allows developers to write HTML-like markup directly inside JavaScript code. It is primarily used in [React](#) to build user interfaces and define reusable UI components.
1. The initial file was generated and later on it was edited function by function.
 2. **Vite** - Vite is a modern, ultra-fast frontend build tool used to develop, and build web applications like React.
 - a. React itself is a JavaScript library for building user interfaces. However, browsers cannot natively read React code (like JSX or TypeScript) without it being processed first. Vite manages this entire behind-the-scenes engineering process.
 - b. Development Server: It spins up a local testing environment so you can view your React app in a browser while coding.
 - c. Code Transpilation: It converts your modern React syntax, JSX, and CSS into standard JavaScript that any browser can understand.
 3. To run the .JSX file you need to do the following steps (*SKIP THIS IF YOU ALREADY HAVE THE ENTIRE FOLDER*).
 - a. Create a React Project First using your cmd -
 - i. `cd C:\Users\bband\Desktop\bb (<your folder>)`
 - ii. `npm create vite@latest cyberarena -- --template react`
 - iii. `npm install`
 - iv. `npm run dev`
 - v. Then copy your .jsx file into the /src of /cybersrena

```
C:\WINDOWS\system32\cmd. X + v
> npx
> create-vite cyberarena --template react

  o Which linter to use?
  Oxlint

  o Install with npm and start now?
  Yes

  o Scaffolding project in C:\Users\bband\Desktop\bb\cyberarena...
  o Installing dependencies with npm...

added 24 packages, and audited 25 packages in 25s

9 packages are looking for funding
  run `npm fund` for details

found 0 vulnerabilities
  o Starting dev server...

> cyberarena@0.0.0 dev
> vite

VITE v8.1.3 ready in 775 ms
  → Local:   http://localhost:5173/
  → Network: use --host to expose
  → press h + enter to show help

h

Shortcuts
press r + enter to restart the server
press u + enter to show server url
press o + enter to open in browser
press c + enter to clear console
press q + enter to quit
```

- b. Use Vs code and any browser to run to code successfully.
4. Install node.js if not installed - <https://nodejs.org/en/download> (REQUIRED TO RUN THE CODE).
 - a. During installation, *make sure "Add to PATH" is checked.*
 - b. Verify the installation in VS code – open cmd in vs code & run “node -v” then “npm -v”.
5. Then navigate to your Project folder in vs code.
6. Then in cmd after react project creation, navigate to the folder where the .jsx file is present in my pc it was present in /bb/cyberarena & run the command “npm run dev”.

```
C:\Users\bband>cd C:\Users\bband\Desktop\bb\cyberarena

C:\Users\bband\Desktop\bb\cyberarena>npm run dev

> cyberarena@0.0.0 dev
> vite

VITE v8.1.3  ready in 944 ms

  → Local:   http://localhost:5173/
  → Network: use --host to expose
  → press h + enter to show help
12:58:49 pm [vite] (client) hmr update /src/CyBreachArena.jsx
